

# The Kakoi **Peg**

## Assembly Instructions

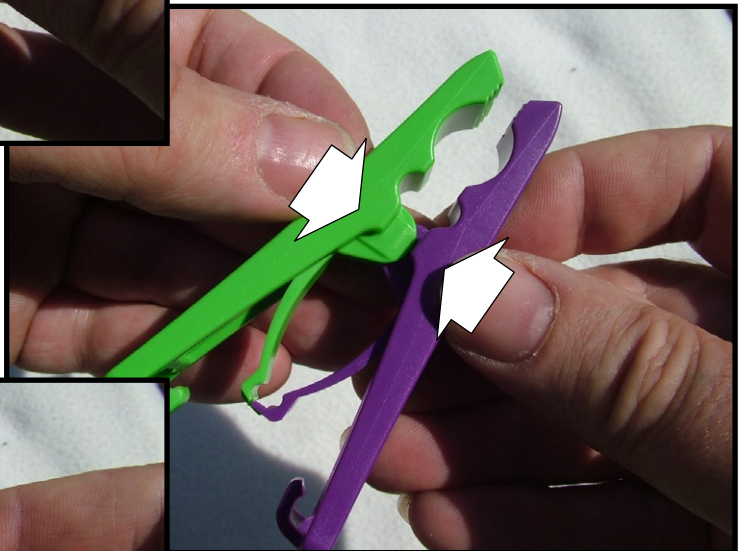

All the peg halves are the same, there isn't a left and right half and all the different colours are the same shape, so you can mix the colours as you like

Once you have assembled two or three pegs it will become obvious how they go together.

You just need to make sure the hinge features are lined up before you "click" them together

If you hold the two halves side by side in the same orientation as they are when assembled...

... just squeeze together until they "click" and that's it.
